Pavement Recycling Systems Cold-In-Place Recycling equipment consists of a full lane mill (PR1000) that will mill off 3" of asphalt concrete on Marine Avenue. As needed, a supplemental mill (W series/RX series) will also be used. The asphalt grindings will be conveyor belted into our Crushing/Recycling Unit (CRMX-2) and crush to specified gradations. The CRMX-2 has a screen that traps any pavement fabric. After gradations have been met, the material is mixed with Foamed Asphalt Recycling agent (from the oil tanker) and water (from the water tank) that is attached to the Cement Distributing Unit per mix design specifications. The blended material is left in a windrow where Cement (from cement distributing unit) is added per mix design specifications. The recycled material will go thru a pickup machine where it is placed into an asphalt paver.

Anticipated CIR production is typically 12 feet per minute to 20 feet per minute depending on road conditions, traffic conditions/control, turn-around points, etc.
